

Abstract

Method for reproducing audio documents 5 with the aid of an interface comprising document groups and associated reproducing device

10 The invention relates to a method of reproduction by a reproduction
apparatus for reproducing audio documents forming part of a set of documents.
The method comprises a prior step of partitioning of the documents of the set
into groups of documents whose audio parameters exhibit a similitude, making
it possible to determine at least one document representing each group by
taking into account its audio parameters. Then, an identifier of a document
15 representing the group is reproduced graphically and/or in a sound manner. In
this way, the user can take note of the type of music involved and can select
this group by virtue of the graphical identifier. He can activate a command
making it possible to go from one group to another, he can also select a group
and reproduce the documents of this group.

20 The invention also relates to a reproduction apparatus furnished with a
user interface allowing reproduction.
